**LinkedIn:** https://www.linkedin.com/in/digambar-pradhan-944a092b6/

## OBJECTIVE

Motivated and detail-oriented BSC undergraduate with a strong foundation in software development and web technologies. Skilled in creating user-friendly web applications using HTML, CSS, and JavaScript, with backend integration using PHP and MySQL. Passionate about teaching, technology, and problem-solving, with a growing interest in data analytics and modern software development. Committed to continuous improvement and professional growth.

## SKILLS

**Technical Skills:** C, C++, JavaScript, HTML, CSS, React.js, Node.js, Express.js, MongoDB, SQL, Git, GitHub

**Behavioral Skills:** Team Collaboration, Problem-Solving, Adaptability

## EDUCATION

**Gayatri Institute of computer Management** **2023 – 2026**
Bachelor of Computer Science
CGPA: 8.1

## PROJECTS

**Explore India** | ***Html, Css, JavaScript, PHP, Mysql***

- Explore India is your most mature project — a PHP-based tour booking platform where travelers can discover and book India trips
- It has a full backend covering user authentication (OTP/password reset), booking workflows, automated email notifications via PHPMailer, cron-based trip reminders, and a review request system after tours complete.
- Designed Mysql schemas and Express routes to support scalable course and user management, with server-side validation and centralized error handling.

**FoodRush** | ***Html, Css, JavaScript, PHP, Mysql***

- FoodRush is a food ordering and delivery platform similar to Swiggy or Zomato. It connects customers with restaurants — customers browse menus, add items to cart, and place orders, while restaurant owners manage their menu and incoming orders through a separate dashboard.
- Designed RESTful APIs with mysql schemas, server-side validation, and centralized error handling.
- Core features include order tracking, cart/checkout, and restaurant-side management.

**Student Voting Management System** | ***Html, Css, JavaScript, PHP, Mysql***

- Developed a responsive wonder world website using HTML, CSS, JavaScript, PHP, and MySQL with a mobile-first, component-driven design.
- Implemented reusable UI components and optimized CSS bundle size to improve page performance and responsiveness.
- Student Voting Management System is a digital election platform built for college/school use. Admins can create elections, register candidates, and monitor results.
- Students log in, view candidates, and cast their vote — with safeguards to ensure each student can only vote once. Results are tallied automatically and shown on a live dashboard.

## CERTIFICATIONS

Python (SAP)
Internet Of Things (IOT)
OSCIT
SQL (Satish Dhawale Sir)
